Transform Your Space with Expert Interior Design Services for technical commercial environments

Creating a functional and aesthetically pleasing environment in all settings is crucial for enhancing efficiency and promoting well-being. Our professional interior design services focus on **furniture space planning, 3D live design,** and **quote creation.** delivering a tailored approach that transforms any space into an effective and functional area.

[The Benefits of Design and Space Planning](#)

- **Maximized Space Utilization:** We optimize the layout to ensure that every inch of your project is used effectively, facilitating smooth operations and accessibility.
- **Enhanced Functionality:** Our designs prioritize the functionality of spaces, improving the flow for on carpet and off carpet spaces, which is essential for efficient healthcare delivery and general workflow.
- **Future-Proofing:** Our designs are adaptable to future needs, allowing for changes in technology, equipment, or workflow protocols.

[Innovative 3D Modeling and Live Design](#)

- **Realistic Visualizations:** Our 3D models, using CET, provide a precise representation of how your space will look, enabling you to see and experience your design before implementation.
- **Informed Decision Making:** You can explore various layouts, furniture options, and color schemes, ensuring that every aspect of the design meets your functional and aesthetic requirements.
- **Cost Efficiency:** Visualizing changes prior to execution helps avoid costly errors and ensures that the final design aligns with your vision.

[Our Process](#)

1. **Queue:** Email your request with project/ customer name, any available drawings and elevations, and requirements to design@symbiote.com. Your request will go into the design queue. We start with an initial scope kickoff to understand your specific needs, operational requirements, and design preferences.
2. **Iterative Space Planning:** Our team develops a comprehensive package that optimizes furniture placement and enhances functionality within your space. Our standard design deliverable includes 2D plans, dimensioned elevations, renderings, and a quote/BOM. Drawing and/or sif files are available upon request.
3. **Installation Drawings:** We create detailed drawings showing product tagging, dimensions, and added annotations with the installer in mind. This is an added service available upon request.
4. **Specials Coordination:** We work very closely with our in-house engineering team to ensure any non-standard requests meet your requirements and translate it into our design deliverables.
